

DID YOU KNOW WE MAKE DIESEL TRANSFER SLABS?

BISON PRECAST

a Forterra brand

OUR PRECAST DIESEL TRANSFER SLABS ARE A POPULAR CHOICE FOR MANY SITES WHERE FUEL STORAGE IS REQUIRED.

Designed and manufactured by Bison Precast, the slabs direct any minor spills or surplus fuel to an absorbent boom and secondary matting, therefore preventing spread to the site roads, site drains and environment.

The benefits of a precast Diesel Transfer Slab include:

- Designed to protect the wider environment through proper collection of spillages.
- Precast slabs ensure a long-lasting solution, which can be relocated and reused.
- No hazardous waste costs at removal.
- Can be in place and compliant within 2 hours with pre-planned order.
- Highly visible drainage direction arrow pre-painted on to slab before delivery.
- Manufactured with lifting hooks for easy install.

Installation Advice

The reusable diesel slabs are installed on an absorbent mat, over sand blinding on top a sub-base of at least 200mm thick Type 1 stone to suit ground conditions.

The absorbent booms and shingle should then be added after the diesel slab is installed.

Please note: We do not offer an installation service with this product.
